

KENNETH CAMACHO

Miami, FL • 786-376-7044 • kenneth.camacho.swe@gmail.com • linkedin.com/in/kennethcxv • github.com/kennethcxv • kennethcamacho.com

EDUCATION

Georgia Institute of Technology — M.S. Computer Science Atlanta, GA | Expected Jun 2027
Specialization: Computing Systems • Coursework: Distributed Systems, Advanced Operating Systems, Database Internals GPA: 3.9 / 4.0

Florida State University — Bachelor's Computer Science, *summa cum laude* Tallahassee, FL | Graduated: Dec 2025
Dean's List all semesters • Coursework: Operating Systems, Compilers, Algorithms, Networks, Architecture GPA: 3.8 / 4.0

WORK EXPERIENCE

Rubrik — Software Engineer Intern Palo Alto, CA | May 2026 – Present

- Built React/TypeScript dashboard views for cloud-security alert triage and backup monitoring across multi-cluster deployments, cutting p95 load time 30% via React Suspense, code-splitting, and selective memoization.
- Refactored GraphQL/Apollo logic across 4 dashboards into shared hooks with normalized caching, eliminating ~50% of duplicated request code and resolving customer-reported cross-view consistency bugs.

Chime — Software Engineer Intern San Francisco, CA | May 2025 – Dec 2025

- Shipped TypeScript/Node.js features in a payment microservice processing \$1.2M+ monthly transaction volume; cut p95 latency 20% via PostgreSQL query-plan tuning (EXPLAIN ANALYZE, partial indexes) and Kubernetes HPA scaling.
- Designed GraphQL/REST contracts and PostgreSQL schemas for a payments service consumed by 3 internal teams; authored the design doc, drove backward-compat review with risk and platform, and shipped Jest tests to 85% coverage.
- Cut launch-week payment incident MTTR ~40% by adding structured logging, OpenTelemetry tracing spans, and Grafana SLO dashboards on the customer-facing checkout path.

EloStack — Software Engineer Intern Miami, FL | May 2024 – Aug 2024

- Cut initial render time 40% on core React workflows via React Profiler analysis, eliminating redundant API calls and applying React.memo / useMemo on hot-path components.
- Owned React/Node.js features across user onboarding and dashboards in releases tied to a 25% retention lift; reviewed REST API PRs and authored shared frontend patterns adopted org-wide.

Sebanda Insurance — Software Engineer Intern Miami, FL | Jan 2024 – Apr 2024

- Built a Python/Pandas reporting tool over PostgreSQL views automating weekly financial reconciliation, saving the finance team ~5 hours/week and cutting data-entry errors 20%.

PROJECTS

Distributed Key-Value Store (Raft) | Go, RocksDB, Docker Feb 2026 – Apr 2026

- Implemented Raft consensus in Go with leader election and log replication for a fault-tolerant key-value store across a 5-node cluster, validating strong consistency on 1M+ entries under simulated network partitions.
- Used RocksDB-backed LSM-tree storage with MVCC versioning; benchmarked ~10k writes/sec, instrumented Prometheus metrics (ops/sec, p99 latency), and Dockerized each node.

Distributed Job Queue | Go, Redis, Docker, Linux Jan 2026 – Apr 2026

- Built a distributed job queue in Go with priority scheduling, token-bucket rate limiting, retries, and a dead-letter queue, scaling to 5 worker nodes processing 10k tasks/hour.
- Instrumented Prometheus metrics (queue depth, task latency, failure rate) and Grafana dashboards with alerting on stuck workers; documented runbooks for triaging throughput and reliability issues.

Semantic Code Search Engine | Python (FastAPI), PostgreSQL/pgvector, Redis, Docker Jan 2026 – Mar 2026

- Built a semantic code-search service over a 500k-line codebase, combining BM25 keyword retrieval with code embeddings in PostgreSQL/pgvector; reduced irrelevant top-k results 40% on a hand-labeled set vs. a vector-only baseline.
- Engineered an offline evaluation harness scoring recall@k and MRR on a labeled query set, plus a Redis-cached embedding layer cutting p95 query latency 35% under load.

AWARDS & LEADERSHIP

- Founder, Code Culture (Aug 2022 – Present)** — 4,500+ member student programming community; led 8 hackathons and 15+ workshops on algorithms, systems, web dev, and ML, mentoring 200+ students.
- 1st Place, EMerge Americas Hackathon (UM)** — Built a real-time fraud-detection prototype using Kafka, Python, and a gradient-boosted classifier; benchmarked anomaly detection on 100K simulated transactions.
- 1st Place, NextEra Energy Hackathon (FSU)** — 24-hour solar generation forecasting model (LSTM with weather and seasonality features) cutting MAPE 18% vs. a persistence baseline on NextEra's public dataset.
- 1st Place, Pluto Hacks** — In-browser Python/JavaScript playground via WebAssembly, with collaborative editing using Yjs CRDTs.
- 2nd Place, Knight Hacks(UCF)** — Built a Chrome extension that captions and summarizes online lectures using Whisper and a Large Language Model, helping students review 30-minute lectures faster.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, Java, C++, SQL

Frontend: React, Next.js, Apollo, Tailwind CSS, HTML, CSS

Backend: Node.js, Express, FastAPI, gRPC, GraphQL, REST APIs, Microservices

Data & Search: PostgreSQL, pgvector, Redis, RocksDB, embeddings, semantic search, hybrid retrieval (BM25 + dense), vector databases

Cloud & DevOps: AWS, Docker, Kubernetes, Linux, CI/CD (GitHub Actions), Bazel, Prometheus, Grafana, Git, Kafka

Concepts: Distributed Systems, System Design, Concurrency, Operating Systems, Algorithms, Data Structures
